

# 1V0-601 - VMware Certified Associate 6 – Data Center Virtualization

<http://www.certleader.com/1V0-601-dumps.html>

1. In what two situations would an administrator use Storage vMotion? (Choose two.)

- A. To create new virtual machines in the host.
- B. To bring powered-down hosts back online.
- C. To select separate locations for the virtual machine disk files.
- D. To migrate virtual machines from one datastore to another.

**Answer:** C, D

Explanation:

You can use vMotion to migrate virtual machines to a different host and datastore simultaneously. In addition, unlike Storage vMotion, which requires a single host to have access to both the source and destination datastore, you can migrate virtual machines across storage accessibility boundaries.

2. What are two features of vSphere 6.x that help address the availability challenges that organizations face? (Choose two.)

- A. Deploying from Templates
- B. Host Profiles
- C. High Availability
- D. Fault Tolerance

**Answer:** C, D

Explanation:

VMware vSphere 6 will provide customers with a highly available, resilient, on-demand cloud infrastructure to run, protect and manage any application VMware vSphere 6 appealing due to the new availability and fault tolerance capabilities for protecting applications on-premises.

3. What does Storage DRS do to determine if a particular disk device is overburdened?

- A. Powers down the storage device.
- B. Monitors disk I/O latency on the shared storage devices.

- C. Takes a count of virtual machines on the storage device.
- D. Reads the data on the storage devices.

**Answer: B**

4. Which feature of vSphere networking restricts the inbound and outbound network bandwidth of a group of virtual machines?

- A. Differentiated Services Code Point
- B. NetFlow
- C. Traffic Shaping
- D. Port Mirroring

**Answer: C**

Explanation:

Traffic Shaping Allows you to restrict the inbound and outbound network bandwidth of a group of virtual machines.

5. A company has recently reported a financial loss and has identified that a major part of their expenses is the maintaining and managing of their virtualized network in the data center. The company needs a solution that would help cut down on their operating expenditures. What should the company do to solve this issue?

- A. Virtualize the physical servers.
- B. Implement a management platform for IT services on vSphere and other hypervisors.
- C. Remove all physical servers which are not in use.
- D. Increase the number of physical servers.

**Answer: D**

6. What are two advantages of Network I/O Control? (Choose two.)

- A. Monitors the virtual machine storage.
- B. Performs load-based teaming.

- C. Enforces network bandwidth limit on the virtual distributed switch.
- D. Enforces traffic isolation.

**Answer:** B, C

Explanation:

Limits - Enforce traffic bandwidth limit on the overall VDS set of dvUplinks. Load-based Teaming - Efficiently uses a VDS set of dvUplinks for networking capacity.

7. What are two advantages of using vSphere Data Protection In a data center? (Choose two.)

- A. Creates new virtual machines.
- B. Migrates virtual machines.
- C. Ensures minimum impact on network bandwidth.
- D. Provides increased backup data capacity.

**Answer:** A, C

8. Which statement best defines virtualization?

- A. The process of scaling applications and licenses to support multiple hosts
- B. The process of moving virtual machines from one .place to another
- C. The process of replicating virtual versions of physical components
- D. The process of creating virtual versions of physical components

**Answer:** D

## Thank You for Trying Our Product

\* 100% Pass or Money Back

All our products come with a 90-day Money Back Guarantee.

\* One year free update

You can enjoy free update one year. 24x7 online support.

\* Trusted by Millions

We currently serve more than 30,000,000 customers.

\* Shop Securely

All transactions are protected by VeriSign!

**100% Pass Your 1V0-601 Exam with Our Prep Materials Via below:**
