

70-743 - Upgrading Your Skills to MCSA: Windows Server 2016

<https://www.certleader.com/70-743-dumps.html>

1.. You have a server named Server1 that runs Windows Server 2016 You install the Docker daemon on Server! You need to configure the Docker daemon to accept connections only on TCP port 64500. What should you do?

- A. Run theNew-NetFirewallRulecmdlet
- B. Run theSet-ServiceWindows PowerShell cmdlet.
- C. Edit the daemon.json file.
- D. Edit the configuration json file

Answer: C

2. Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains a virtual machine named VM1.

You need to ensure that you can use nested virtualization on VM1. What should you run on Server1?

- A. the Mount-VHD cmdlet
- B. the Diskpart command
- C. the Set-VHD cmdlet
- D. the Set-VM cmdlet
- E. the Set-VMHost cmdlet
- F. the Set-VMProcessor cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the Optimize-VHD cmdlet

Answer: F

3. You have a Hyper-V host named Served That runs Windows Server 2016

Server1 has a virtual machine named VM1 VM1 is configured to run the Docker daemon. On VM1 you have a container network that uses transparent mode

You need to ensure that containers that run on VM1 can obtain IP addresses from DHCP. What should you do?

- A. On VM1, rundocker network connect

- B. On Server1 runGet-VMNetworkAdapter-VMName VM1| Set-VMNetworkAdapter-MacAddressSpoofing On
- C. On Server1, rundocker network connect
- D. On VM1, runGet-VMNetworkAdapter-VMName VM1| Set-VMNetworkAdapter-MacAddressSpoofing On.

Answer: D

4. Note: This question is part of a series of questions that use the same similar answer choices An answer choice may be correct for more than one question in the series Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question

You have a Hyper-V host named Server1 that runs Windows Server 2016 You plan to deploy several shielded virtual machines on Server1

You deploy a Host Guardian on a new server

You need to ensure that Server1 can host shielded virtual machines. What should you run first?

- A. the Mount-VHD cmdlet
- B. the Diskpart command
- C. the Set-VHD cmdlet
- D. the Set-VM cmdlet
- E. the Set-VMHost cmdlet
- F. the Set-VMProcessor cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the Optimize-VHD cmdlet

Answer: G

5. Your network contains an Active Directory forest named contoso.com. The forest contains an Active Directory Federation Services (AD FS) farm.

You install Windows Server 2016 on a server named Server2

You need to configure Server2 as a node in the federation server farm

Which cmdlets should you run? To answer, select the appropriate options in the answer area

First cmdlet to run:

▼

Install-AdfsFarm
Install-Package
Install-WindowsFeature

Second cmdlet to run:

▼

Install-AdfsFarm
New-AdfsOrganization
Set-AdfsFarmInformation
Set-AdfsProperties

Answer:

First cmdlet to run:

▼

Install-AdfsFarm
Install-Package
Install-WindowsFeature

Second cmdlet to run:

▼

Install-AdfsFarm
New-AdfsOrganization
Set-AdfsFarmInformation
Set-AdfsProperties

6. Your network contains an Active Directory forest. The forest contains two domain controllers named DC1 and DC2 that run Windows Server 2016. DC1 holds all of the operations master roles.

DC1 experiences a hardware failure.

You plan to use an automated process that will create 1000 user accounts. You need to ensure that the automated process can complete successfully.

Which command should you run? To answer, select the appropriate options in the answer area.

-identity "DC2" -OperationMasterRole

Answer:

-identity "DC2" -OperationMasterRole

7. Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have three servers named Server1, Server2, and Server3 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed. Server3 has the iSCSI Target Server service installed.

You need to create a Hyper-V cluster. Which tool should you use first?

- A. the clussvc.exe command
- B. the cluster.exe command
- C. the Computer Management console
- D. the configurehyperv.exe command
- E. the Disk Management console
- F. the Failover Cluster Manager console
- G. the Hyper-V Manager console
- H. the Server Manager Desktop app

Answer: H
