

CV0-001 - CompTIA Cloud+ Certification Exam

<http://www.certleader.com/ CV0-001-dumps.html>

1. Which of the following locations would a system engineer MOST likely place a NAS storage device for VM image files?

- A. In the same subnet as the associated hypervisors
- B. Outside of the external router
- C. In a remote datacenter for geographic diversity
- D. Behind a LUN mask to maximize obfuscation

Answer: A

2. Which of the following cloud services provides application isolation?

- A. DaaS
- B. BPaaS
- C. CaaS
- D. SaaS

Answer: D

3. An administrator deployed ten application servers from a single VM template. A senior administrator notices that these ten VMs are not using their resources efficiently. Which of the following is MOST likely the issue with the new servers?

- A. The dynamic resource pool is malfunctioning.
- B. The server is missing security patches.
- C. The VM servers were not properly configured.
- D. There are insufficient resources available on the host.

Answer: C

4. An administrator has enabled NPIV and has configured the SAN for SAN boot; however, SAN boot fails intermittently. Which of the following, if configured incorrectly, could cause the issue?

- A. LUN Masking
- B. Storage cluster

- C. Zoning
- D. WWPN

Answer: D

5. When conducting penetration testing on production systems during business hours, such testing will MOST likely cause disruption to operations when doing which of the following?

- A. When testing account lockout policies
- B. When checking file system ACLs
- C. When footprinting the network
- D. When discovering service versions

Answer: A

6. An employee is asked to run an instance of a Linux OS while booted up in a Windows OS. Which of the following types of virtualization would be used to meet this requirement?

- A. Type I
- B. Type II
- C. Bare Metal
- D. Native

Answer: B

7. An administrator deployed a VM from a template which has the firewall disabled. The server IP address is manually assigned. The administrator cannot ping the server by IP address or DNS hostname and has logged in from the hypervisor management console to verify the TCP/IP settings are correct. Which of the following is MOST likely the cause of the issue?

- A. The routing table is incorrect.
- B. The virtual NIC is not bridged.
- C. The VLAN tag is incorrect.
- D. The guest tools are not installed.

Answer: B

8. Management has implemented a policy which states that the OS, the swap file, and data must each reside on its own disk. The virtualization administrator has deployed a VM from a template that has one virtual disk configured. Which of the following steps **MUST** the administrator take to comply with policy?

- A. Add two virtual disks to the VM
- B. Create two partitions on the existing virtual disk
- C. Create three partitions on the existing virtual disk
- D. Add three virtual disks to the VM

Answer: A

9. A company that provides cloud-based storage services wants to ensure that if underlying hard disk drives are sent to the disposal facility, they will not contain any data in clear-text format. Which of the following should be done to accomplish this task?

- A. Implement degaussing
- B. Ensure that ACLs are configured on users' data
- C. Implement full-disk encryption
- D. Fill disk with random data before disposal

Answer: C

10. A new host has been bought to be a part of a new cluster. The purchase order specifies this server has four physical CPUs with eight cores each. After the administrator boots the host, there are only 24 logical processors available for VM allocation. Which of the following **BEST** describes this problem?

- A. The server requires a firmware upgrade to version 8.2
- B. The BIOS does not have virtualization support features completely enabled
- C. The virtualization license is not the enterprise edition
- D. A CPU is dead on arrival or disabled on the motherboard

Answer: D

11. Which of the following describes a best practice for placement of VM swap files in a virtualized environment?

- A. Place them on the same datastore as the OS
- B. Place them on the same datastore as the data
- C. Place them on their own datastore
- D. Place them on the local disk of the VM host

Answer: C

12. The Chief Information Officer (CIO) of a company is tasked to save costs by reducing datacenter space. The administrator explains that virtualization of servers will support this task as a benefit of migrating to a cloud environment known as:

- A. Increased server efficiency.
- B. Infrastructure consolidation.
- C. Total cost of ownership reduction.
- D. Increased availability.

Answer: B

13. Which of the following technologies would MOST likely be used for personal use to virtualize a desktop?

- A. Type II
- B. Type I
- C. RAID 5
- D. RAID 0

Answer: A

14. A JBOD is being monitored and an administrator notices that a high number of writes occur in short timeframes in the last 24 hours. Which of the following BEST describes this issue?

- A. I/O bursting
- B. I/O throttling
- C. I/O threshold
- D. I/O saturation

Answer: A

15. A technician wants to configure a server for storage redundancy so that if any two of the four drives fail, the server is still operational. Which of the following should the technician configure?

A. RAID 0

B. RAID 1

C. RAID 5

D. RAID 6

Answer: D

Thank You for Trying Our Product

* 100% Pass or Money Back

All our products come with a 90-day Money Back Guarantee.

* One year free update

You can enjoy free update one year. 24x7 online support.

* Trusted by Millions

We currently serve more than 30,000,000 customers.

* Shop Securely

All transactions are protected by VeriSign!

100% Pass Your CV0-001 Exam with Our Prep Materials Via below:
