

JN0-643 - Enterprise Routing and Switching, Professional (JNCIP-ENT)

<http://www.certleader.com/JN0-643-dumps.html>

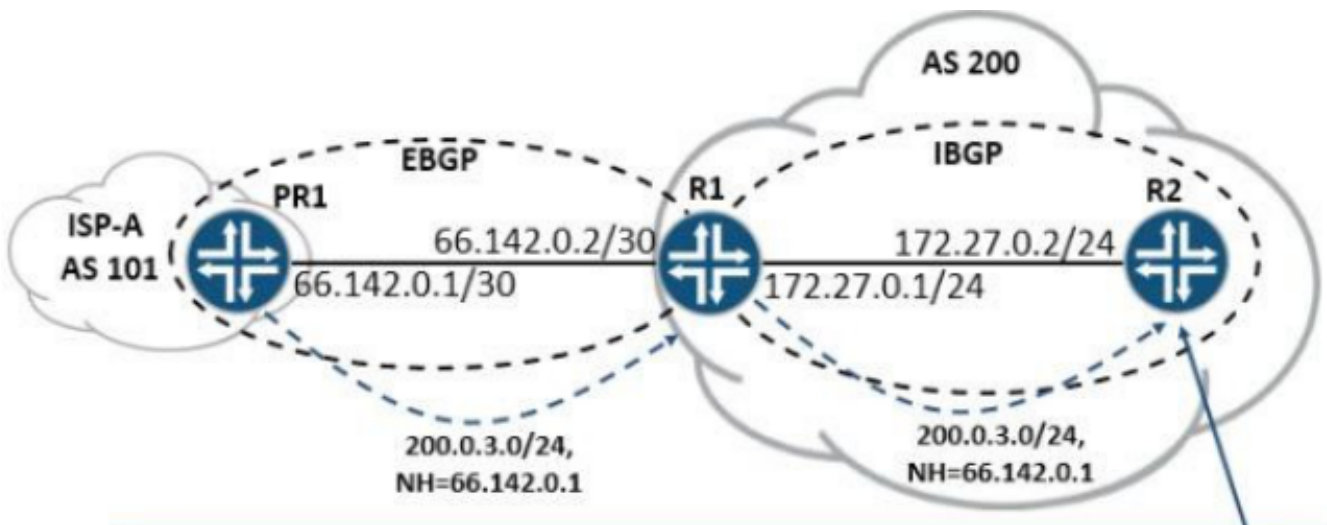

1. Your company recently implemented Layer 2 authentication and access control to secure users accessing the corporate network. You implemented 802.1X, MAC RADIUS, and a captive portal to support a variety of hosts on the network. Senior management is concerned that valid users might be authenticated incorrectly on the network and they ask you questions about how these different access technologies are used simultaneously.

Which three statements are correct? (Choose three.)

- A. MAC addresses that are part of a MAC address whitelist or a static MAC list are authenticated before any other authentication protocol is invoked.
- B. Captive portal is a supported fallback option for 802.1X.
- C. If the authentication server fails to respond to access requests and both a server-fail and guest VLAN are configured correctly, the server-fail VLAN takes precedence over the guest VLAN.
- D. Captive portal can only be configured on Layer 3 interfaces.
- E. If a port is configured with 802.1X and the host does not respond to EAP requests, no other authentication protocol can authenticate the host.

Answer: A,B,C

2. -- Exhibit --

```

user@R2> show route 200.0.3.0/24 hidden

inet.0: 48 destinations, 61 routes (41 active, 0 holddown, 20 hidden)
+ = Active Route, - = Last Active, * = Both

200.0.3.0/24      [BGP/170] 00:13:52, localpref 100, from 192.168.16.1
                  AS path: 101 I, validation-state: unverified
                  Unusable
    
```

-- Exhibit --

Click the Exhibit button.

ISP-A is advertising the 200.0.3.0/24 route to R1. R1 is advertising this BGP route to R2 but the route is hidden on R2.

Referring to the exhibit, which statement is correct about the 200.0.3.0/24 route?

- A. The route is unusable because the next hop is not reachable from R2.
- B. The route is unusable because it has not been verified.
- C. The route is hidden because R1 is changing the next hop to 192.168.16.1.
- D. The route is hidden because R2 has a more preferred route.

Answer: A

3. Which connection method do OSPF routers use to communicate with each other?

- A. IP protocol number 89
- B. TCP port 179
- C. UDP port 179
- D. IP protocol number 6

Answer: C

4. -- Exhibit --

-- Exhibit --

Click the Exhibit button.

Referring to the exhibit, what is preventing the OSPF adjacency on interface ge-0/0/4 from forming?

- A. area mismatch
- B. subnet mismatch
- C. MTU mismatch
- D. authentication mismatch

Answer: A

5. Your company asks you to configure multicast routing on a Junos device. They tell you that the router at IP address 192.168.1.4 is the root of the shared multicast delivery tree.

Which command allows you to configure the Junos device as a non-RP router for PIM?

- A. set protocols pim rp local family inet disable
- B. set protocols pim rp local address 192.168.1.4
- C. set protocols pim rp static address 192.168.1.4
- D. set protocols pim rp auto-rp announce

Answer: C

6. Which two statements about the voice VLAN feature are correct? (Choose two.)

- A. It can be used to separate untagged data and VLAN tagged VoIP traffic into different VLANs on an access port.

- B. It can be used to assign VoIP traffic into a CoS forwarding class.
- C. It can be used to separate untagged data and VLAN tagged VoIP traffic into different VLANs on a trunk port.
- D. It can be used to apply a policer to VoIP traffic.

Answer: A,B

7. Which two statements are true about the configuration shown below? (Choose two.)

```
[edit routing-options multicast] user@router# show
```

```
ssm-groups 227.0.0.0/24; asm-override-ssm;
```

- A. It allows SSM operations in only the 227.0.0.0/24 range.
- B. It allows SSM operations in the 227.0.0.0/24 range and the dedicated range.
- C. It allows only ASM operations in the dedicated SSM range.
- D. It allows both ASM and SSM operations in the dedicated SSM range.

Answer: B,D

-- Exhibit --

Click the Exhibit button.

Referring to the exhibit, which answer is correct?

- A. R2 is the DR and R1 is the BDR.
- B. R4 is the DR and R2 is the BDR.
- C. R2 is the DR and R3 is the BDR.
- D. R3 is the DR and R2 is the BDR.

Answer: C

10. Which set of BGP attributes is preferred by the Junos OS?

- A. MED. 100

AS path: 50 50 50

Local preference: 50 Origin: I

B. MED. 50

AS path: 50 50 50

Local preference: 1 Origin: E

C. MED. 100

AS path: 50 50 50 50

Local preference: 50 Origin: I

D. MED. 50

AS path: 50 50 50

Local preference: 50 Origin: E

Answer: A

11. Which statement is true about LLDP?

- A. It allows you to split a broadcast domain into multiple isolated broadcast subdomains.
- B. It dynamically manages VLAN registration in a LAN.
- C. It maintains a separate spanning-tree instance for each VLAN.
- D. It is a Layer 2 protocol that facilitates network and neighbor discovery.

Answer: C

12. -- Exhibit --

-- Exhibit --

Click the Exhibit button.

Which statement is true about the IPv6 network shown in the exhibit?

- A. OSPFv2 must be configured to route IPv4 prefixes.
- B. Areas 1 and 2 cannot be a stub or NSSA.
- C. OSPFv3 can use MD5 authentication.
- D. OSPFv3 can route IPv4 prefixes.

Answer: D

13. You are asked to set up 802.1X port authentication for all access ports on your EX Series switch. You have a device that does not support 802.1X supplicants and you must ensure this device is authenticated. You must also ensure that no unnecessary delay occurs when authenticating this device.

Which statement is correct?

- A. You should enable MAC RADIUS on the interface and use 802.1X multiple mode.
- B. You should enable MAC RADIUS on the interface and statically add the MAC address to the 802.1x configuration.
- C. You should enable MAC RADIUS on the interface and include the restrict parameter.
- D. You should enable MAC RADIUS on the interface and include the disable parameter.

Answer: C

14. A non-802.1X printer is connected to ge-0/0/0 on an EX Series switch.

Which configuration statement will authenticate the device against an authentication server?

- A. set protocols dot1x authenticator static 22:22:22:22:22:22 interface ge-0/0/0
- B. set protocols dot1x authenticator interface ge-0/0/0 supplicant single
- C. set protocols dot1x authenticator interface ge-0/0/0 mac-radius restrict
- D. set protocols dot1x authenticator interface ge-0/0/0 disable

Answer: C

```

Click the Exhibit button.

You are asked to place employees that are in the sales group into their own VLAN called Sales_VLAN with a VLAN ID of 123 on port ge-0/0/17. The VLAN must be assigned dynamically. After trying an initial configuration, you see that users in the sales group are not assigned to the Sales_VLAN.

Referring to the exhibit, which two configuration statements are needed on the EX Series switch to resolve this problem? (Choose two.)

- A. set access profile radius_server authentication-order radius
- B. set vlans Sales_VLAN interface ge-0/0/17.0
- C. set interfaces ge-0/0/17.0 family ethernet-switching vlan members Sales_VLAN
- D. set protocols dot1x authenticator authentication-profile-name radius_server

Answer: A,D

19. What are three types of PVLAN broadcast domains? (Choose three.)

- A. primary VLAN
- B. dynamic VLAN
- C. isolated VLAN

D. community VLAN

E. S-VLAN

Answer: A,C,D

20. -- Exhibit --

-- Exhibit --

Click the Exhibit button.

Referring to the exhibit, R2 is sending a route to R1 with a community value. Which statement is correct?

- A. Routes will be accepted without change in the attributes.
- B. All routes will be rejected.
- C. Routes will be accepted with the community value removed.
- D. Routes will be rejected with the community value removed.
